INTRODUCTION	3
DATABASE OF RECRUITED COACHES	3
SUMMARY	6

Introduction

This deliverable establishes the list of trainers who will participate in the training courses delivered by this project. The list is the basis for establishing permanent network of Trainers available for further education and training of craftsmen and on-site workers. The network will be used as the platform for exchanging experiences and knowledge, discussing new approaches to training, knowhow and best-practice sharing. It will also provide ideas, materials and opportunities for professional development and improvement of training materials based on practical experience, as well as for organisation of regular workshops.

Trainers are recruited from skilled professionals, researchers, teachers, managers and practitioners. This network will be further supported with private easy-to-use database, to be developed in WP5.

When this recruiting phase is accomplished, integration of successful and certified trainers with trainers section of the ingREeS database would follow (delivered by the H2020-ingREeS project, GA no. 649925).

Summary

In total, 80 persons from four partner countries are registered in the network so far. This number is not final however and is expected to rise somewhat during the project. The Czech Republic and Slovakia covers most of the trainers. Both countries have also chosen to train most of the professions selected in the project so their higher share of trainers is understandable. Due to relative proximity of nZEB topics intended for teaching for all

professions (see D2.1) predominant specialization of the trainers is “General”. This makes for flexible use of the trainers across the individual professions’ trainings.

And it may also off-set some profession’ specializations missing in each country, e.g. a trainer specialized exclusively on hydro-insulators in Czech Republic or a trainer specialized on HVAC in Slovakia. In all countries, further recruitment efforts should focus on two chimney-related professions. So far, there is no trainer specialized exclusively for these professions.
